

ePaint

ePaint-zone

As the name indicates - ePaints - are electronic paintings!

This does not mean, that they are made by computer but that they are made with help of a computer.

Instead of using a brush, the painter uses the electronical equivalent - the penmouse. As colors the colors available on the screen and as tools the simulation of original brushes and pens.

So the difference between a normal ink-drawing and an ePaint is that the result is created on virtual paper instead of a real but the artist is still working manually.
